No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6383745
GENERAL INFORMATION:
APPLICANT: Rather, Philip N.
TITLE OF INVENTION: Methods For Screening For Antimicrobials
TITLE OF INVENTION: Utilizing aarC And Compositions Thereof
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOFTWARE: PACENTER: PC-DOS/MS-DOS SOFTWARE: PACENTER Release #1.0, Version #1.30 CURRENT APPLICATION DATA: APPLICATION NUMBER: US/09/170,187

```
GENERAL INFORMATION:
APPLICANT: Rather, Philip N.
TITLE OF INVENTION: Methods For Screening For Antimicrobials
TITLE OF INVENTION: Utilizing aarC And Compositions Thereof
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: Medlen & Carroll, LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  OPERATING SYSTEM: PC-DOS/MS-DOS

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Grgan: shoot tips; Vector tips (approx. 2 cm from apax) were collected during the spring, frozen and used for mRNA isolation. The SMART-PCR method (Clontech) was used to prepare a library from 1 ug total RNA, using the Lambda TriplEx vector. Plasmid subclones in pTriplEx were recovered by cre-lox excision in E. coli strain BM25.8 and sequenced from the 5' end. 5 others
